Farmers are finding new cost-effectiveness and synergism with WakeUP. Here's your chance to cash in on pre-season savings!

Last season's sale price for WakeUP *Spring* or *Summer* was such a cost-saver for farmers that we're offering it again in spring 2019 for \$85 per gallon — for a limited time. That's \$5 off our regular in-season price of \$90 per gallon.

You can save even more: We're giving you *another* \$5 per gallon discount for orders paid by Feb 28, 2018. Final cost: only \$80 per gallon. Three ounces of WakeUP *Spring* in-furrow is only \$1.88 per acre. Five ounces of WakeUP *Summer*, to amplify response of your foliar nutrients and other sprays, is only \$3.12 per acre.

Just 1/4 ounce of WakeUP *Spring* or *Summer* in a gallon of water drops surface tension of water from 71 dynes to 28 dynes — a 40% reduction that makes sprays clear-coat leaves. But WakeUP is *far more than a surfactant*. Both WakeUP *Spring* and *Summer* create colloidal micelles which use ionic energy to (1) **clear-coat leaves uniformly** with spray solution, (2) **soften the waxy leaf surface** for quick absorption, and (3) **carry foliar nutrients quickly** through the phloem circulation system to accelerate plant metabolism.

How to take advantage of our pre-season special of \$80 per gallon:

Send your order and payment by Feb. 28, 2018. We'll ship your WakeUP on the date you specify. You can also order by credit card by calling our office manager, Jeanene at 319-610-5239 (3.5% is added to credit card orders).

Here are other proven products we're offering:

- **Biodyne USA** has created a new family of beneficial bacterial/mycorrhizal blends for in-furrow and surface application. We've field-tested in-furrow Environoc 401 and their fall-applied residue digester now labeled as *Meltdown* Crop Residue Digester for fall and spring spraying. (<https://biodyne-usa.com/products>)
- **Vitazyme** is a biostimulant proven in 20-plus years of field research by Vital Earth Resources, Gladewater, Texas (www.vitalearth.com). Cost: \$59 per gallon. Only \$6 per acre at 13 oz/acre rate, in-furrow or foliar.
- **LigniLeaf** and **LigniSeed** are two formulations of a soluble biostimulant refined from crop lignin. Its growth-stimulating enzymes enhance chlorophyll efficiency. Our Canadian source of this product has field-tested it for 10 years; we've field-tested it for four years. (www.lignition.ca)

We market all products sold by AgriEnergy Resources, Princeton, IL. We've worked closely with AgriEnergy for more than 30 years. Our long-proven AgriEnergy favorites: **Myco Seed Treat** to colonize emerging roots with beneficial mycorrhiza, **SP-1** biostimulant, and **Residue** crop residue biodigester. (www.agrienergy.net)

We're constantly scouting and testing new products with high rates of return on investment. Keep checking our website, www.renewablefarming.com.

Thanks again for your trust, enthusiasm and fresh ideas. Call any of our family team members, anytime!

WakeUP products are manufactured by **Generation Ag LLC**, 1601 South Union Road, Cedar Falls IA 50613
